Check a PDF before sharing

Documents > Check before sharing > Try a fictional sample

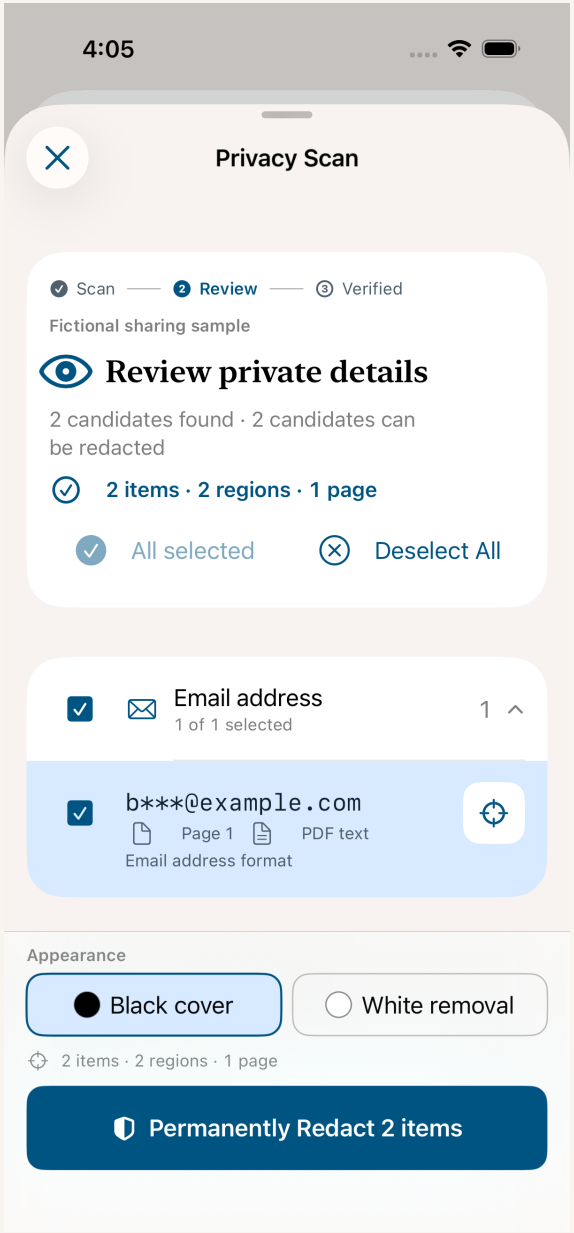

1. Start in Documents

2. Choose the fictional sample

3. Review in page context

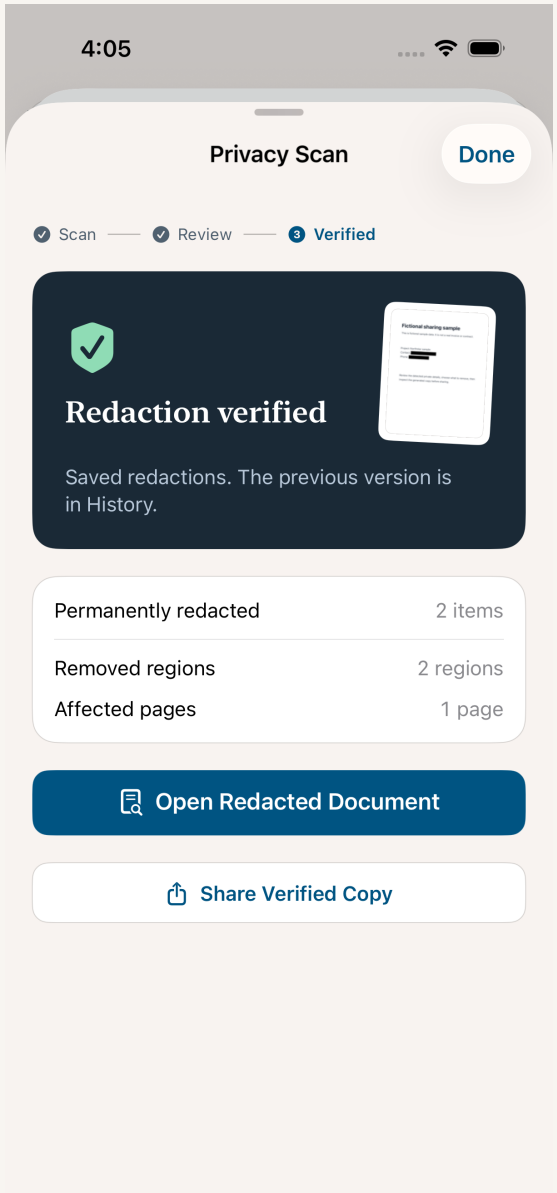

Actual build-23 iPhone simulator screenshots from retained validation runs. Fictional data only.

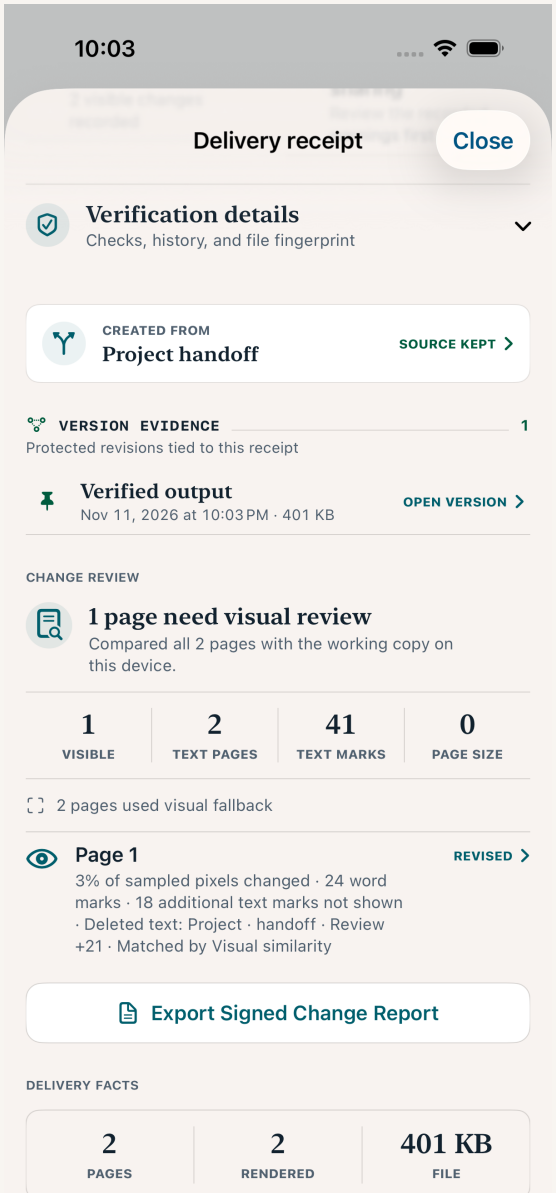

Inspect the copy and its receipt

The redaction result and separate delivery receipt demonstrate two related review paths.

4. Inspect the redaction result

Separate output receipt example

After reviewing and confirming candidates, open the redacted document to inspect the result. The source remains available in version history.

For an image-based delivery copy, open Deliver > Verify & Share. Open Delivery receipt to inspect output checks, warnings and the corresponding file fingerprint.

The receipt shown here is from a separate fictional "Project handoff" fixture. It is not a receipt for the sample shown on the left. It intentionally retains a visual-review warning.

Image-based output removes searchable text, links and interactive forms. Automatic detection can miss content. File checks do not certify accuracy, signer identity or legal compliance.

No PaperPath account, network connection or AI model download is needed for the core workflow.
